

Nathen was Diagnosed with Stage 4 Neuroblastoma, a rare form of cancer in small children and the most aggressive. Chances of survival for a child in stage 4 our about 30% to 40%, but there is a hope in the research and treatments that are coming out, that will soon bring that percentage up. As of today, there are a few states that have doctors that are administering these different types of treatments that are helping children with neuroblastoma.

10 Operations

10 Rounds Chemo

15 Radiation Treatments
